## Controls and compliance checklist

## Controls assessment checklist

Yes	No	Control
	$\checkmark$	Least Privilege
	$\checkmark$	Disaster recovery plans
$\checkmark$		Password policies
	$\checkmark$	Separation of duties
$\checkmark$		Firewall
	$\checkmark$	Intrusion detection system (IDS)
	$\checkmark$	Backups
$\checkmark$		Antivirus software
	$\checkmark$	Manual monitoring, maintenance, and intervention for legacy systems
	$\checkmark$	Encryption
	$\checkmark$	Password management system
$\checkmark$		Locks (offices, storefront, warehouse)
$\checkmark$		Closed-circuit television (CCTV) surveillance
		Fire detection/prevention (fire alarm, sprinkler system, etc.)

## Compliance checklist

Payment Card Industry Data Security Standard (PCI DSS)

Yes	No	Best practice		
		Only authorized users have access to customers' credit card information.		
	$\checkmark$	Credit card information is stored, accepted, processed, and transmitted internally, in a secure environment.		
		Implement data encryption procedures to better secure credit card transaction touchpoints and data.		
	$\checkmark$	Adopt secure password management policies.		
<u>General D</u>	ata Pro	tection Regulation (GDPR)		
Yes	No	Best practice		
	$\checkmark$	E.U. customers' data is kept private/secured.		
<b>V</b>		There is a plan in place to notify E.U. customers within 72 hours if their data is compromised/there is a breach.		
$\checkmark$		Ensure data is properly classified and inventoried.		
$\checkmark$		Enforce privacy policies, procedures, and processes to properly document and maintain data.		
System and Organizations Controls (SOC type 1, SOC type 2)				
Yes	No	Best practice		
	$\checkmark$	User access policies are established.		
	$\checkmark$	Sensitive data (PII/SPII) is confidential/private.		
$\checkmark$		Data integrity ensures the data is consistent, complete, accurate, and has been validated.		
$\checkmark$		Data is available to individuals authorized to access it.		

## **Recommendations:**

In order for Botim Toys to ensure business continuity during emergencies, it is crucial for them to create comprehensive disaster recovery plans. These plans should outline clear procedures and strategies to quickly restore operations in the event of a disruption.

Customer data must be protected from external threats through encryption. This will help safeguard sensitive information and minimize the risks of data breaches or cyberattacks.

Employee access needs to be limited to the minimum necessary privileges needed for task completion. Enforcing separation of duties can further reduce the potential for insider threats, ensuring that no single individual has too much control over critical processes.

Implementing an Intrusion Detection System (IDS) is vital for detecting and responding to unauthorized access attempts. An IDS can provide early warnings about potential threats, allowing Botim Toys to react swiftly.

Password security needs to be strengthened by enforcing policies that require passwords to be at least eight characters long, including a mix of letters, numbers, and special characters. These passwords should also expire after a set amount of time and prompt the user to change it, ensuring passwords are fresh. This makes it more difficult for unauthorized individuals to gain access to sensitive systems. A password management system can help with this by streamlining the process of password management.

Finally, it is essential to establish a routine for monitoring and maintaining legacy systems. Clear procedures should be in place for emergency interventions to ensure that these systems remain functional and secure during critical situations.
